PASAR *is an innovative service designed to benefit the individual users of psychology-related information. It provides a comprehensive literature search capability at a level of complexity achievable only through automated retrieval techniques. The intellectual burden for conducting an effective search is shared by the requester and APA information specialists who formulate specific retrieval strategies, augmenting vocabulary and other search parameters supplied by the requester. Experience has provided APA information specialists with the skills to efficiently interact with the automated data base which contains records published in PSYCHOLOGICAL ABSTRACTS from 1967 through the present.*

Charges for processing ***PASAR*** *requests are based on the amount of computer time required to perform a search. Typically these charges range from $40 to $60 and will not exceed $100 unless the requester is contacted first. The total charge for a search is based on its complexity and is in most cases unrelated to the number of references retrieved. For example, a complex search strategy involving many variables or limiting factors may require more computer time and may result in fewer references retrieved than a broad search with few limiting factors.*

The **PASAR** Request Form has been designed to assist you in constructing a comprehensive statement of your requirements. However, it should not restrict your input. Provide whatever other information you feel will augment the information specialist's understanding of your requirements. These guidelines should help to clarify items on the request form.

ITEM 1. Narrative statement of search topic. Provide a detailed description of the subject matter you wish to have retrieved. Be specific and define terms which have special meaning in the context of your request. Qualify search topics representing intensively researched areas or of broad scope by stating elements of interest. Please avoid submitting multiple, discrete requests on a single **PASAR** Request Form, since such requests cannot be processed for a single fee. However, multiple aspects of a primary subject may be requested. The distinction is illustrated in the following examples.

Acceptable: "the effects of socioeconomic status, education level, or birth order on career motivation in women."

"Career motivation" is the primary element of this request, while the other elements serve merely to qualify or narrow the scope of this rather broad subject area.

Unacceptable: "the measurement of employee attitudes concerning wages and benefits. Also desire references dealing with the factors that influence management decision-making with respect to personnel policies and procedures."

Although these two topics are closely related to the design and administration of personnel policies and procedures, two separate search strategies would have to be executed to retrieve the specific information requested, and there would have to be a separate charge for each.

ITEM 2. Descriptor(s) relevant to dependent variable(s). Provide a list of words or phrases that indicate the subject matter of prime interest. Descriptors for the "acceptable" example (see Item #1) might include: career motivation, career preference, and career aspirations.

ITEM 3. Descriptor(s) relevant to independent variable(s). Provide a list of words or phrases that will qualify or narrow the scope of the dependent variable. Descriptors for the "acceptable" example (see Item #1) might include: socioeconomic status, social class, educational level, birth order and women.

ITEM 4. Relevant citations and/or authors. List key citations and/or authors associated with the search topic. This information may serve as a useful aid in search strategy development and in retrieval precision.

ITEM 5. Population. Population requirements are often essential to the actual information need; however, they can unnecessarily limit the search, causing retrieval of few of the relevant records. Therefore, consider your requirements carefully.

ITEM 6. Search qualifications. Once the subject matter of the search has been defined, you may wish to refine it by time span, article language or document type. Dissertations and book reviews are covered in PA by citation only.

ITEM 7. Sorting requirements. Please indicate whether you would prefer to have references sorted alphabetically by author or chronologically by year.

ITEM 8. Intended use of search results. Provide a description of how the references resulting from your search will be used (e.g., definition of a research project, preparation of an article, proposal preparation, dissertation, etc.)

ITEM 9. Size of retrieval. The number of references which may be retrieved varies considerably according to search topic. Retrieval may be limited or extended by changing the specifications for population, other variables, or search qualifications. Large retrievals will be limited by providing the most recent references until the $100 charge is reached. Indicate if you wish retrieval to be limited differently. If there are few references to be retrieved, consider extending the previously designated search specifications.

Ordering information. When ordering a **PASAR** search, please read the above guidelines carefully before completing the request form. A purchase order must accompany all institutional requests for a **PASAR** search. For individuals requesting a **PASAR** search, the signature of the person responsible for payment *must* appear on the **PASAR** request form.
